## PROFESSIONAL SUMMARY

Seventh-semester B.Tech Computer Science (Data Science) student seeking a data science internship. Comfortable with Python-based data analysis, exploratory data analysis and machine learning fundamentals, with a strong interest in research and development.

## PROJECTS

**Credit Card Fraud Detection** | ***Python, Pandas, NumPy, Scikit-learn, Matplotlib*** | link

- Built a Random Forest classifier to flag fraudulent credit card transactions on the Credit Card Fraud Detection Dataset (~569K rows, 31 columns) — checked for missing values and class skew, separated the V1–V28 anonymised features and transaction amount from the fraud label, split the data 80/20 and applied StandardScaler before training with 5-fold cross-validation.

**Customer Churn Prediction** | ***Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn***

- Built a classification model to predict whether credit card customers would exit or stay with the service.
- Trained and compared 4–5 models; Random Forest delivered the best performance.

**House Price Prediction** | ***Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn*** | link

- Performed end-to-end analysis on the California housing dataset, covering data cleaning, exploratory data analysis (EDA) and feature engineering.
- Selected and compared multiple machine learning models, then evaluated prediction accuracy on held-out data.

**Farmer-to-Customer Marketplace (Prototype)** | ***Antigravity***

- 6th Semester · Group Mini Project
- Group mini project building a platform that connects farmers directly with customers, removing the middlemen from the supply chain.
- Designed to improve farmer income and margins while giving customers access to fresh produce at fairer prices.
- Prototype developed using Google Antigravity

## EDUCATION

**APJ Abdul Kalam Technological University** — **Sep 2023 – Apr 2027**
*B.Tech in* ***Computer Science and Engineering (Data Science)*** — *Mavelikara*

- Currently in the 7th semester; CGPA 6.57.

**Sree Narayana Central School** — **Jun 2021 – Aug 2023**
*12th Standard in* ***Biology & Mathematics*** — *Mavelikara*

- Main subjects: Biology and Mathematics; scored 63.2%.

## TECHNICAL PROFICIENCIES

**Programming Languages**: Python, HTML, CSS
**Machine Learning**: Scikit-learn
**Data Analysis & Visualisation**: Pandas, NumPy, Matplotlib
**Databases**: SQL
**Version Control**: Git, GitHub
**IDE**: VS Code, Google Colab

## LICENSES & CERTIFICATIONS

- **Statistical Data Analysis: Application to Atmospheric Science** – NPTEL
- **The Ultimate Job-Ready Data Science Course** – CodeWithHarry
- **Complete 2026 Python Bootcamp: Learn Python from Scratch** – CodeWithHarry
